PORTFOLIO TRANSPARENCY<sup>1</sup>

 The materiality of our credit portfolio exposure to Climate-related & Environmental risks was constantly monitored during 2023 leveraging on a strengthened and consolidated methodology

### KEY FIGURES

#### **TRANSITION RISK**

(Loans to NFCs)

- Exposure to sectors with **High and Very High transition risk: 18.4%** 
  - Lower than the level of 19.1% for the Italian system<sup>2</sup>

Exposure to coal-related sectors strongly affected by climate transition **reduced by 93% Y/Y, to €1.8m at YE 2023** 

#### **PHYSICAL RISKS**

(Collateral values underlying exposures towards Households and NFCs)

- Exposure to sectors with **High and Very High Acute physical risk: 12.4%**
- Exposure to sectors with **High and Very High Chronic physical risk: 0.2%**

The low exposure to physical risks is driven by the geographical footprint of our credit portfolios, mainly located in the North of Italy

#### ENVIROMENTAL RISKS (Loans to NFCs)

- The identified risk drivers are **consistent with the EU taxonomy** (biodiversity loss, circular economy, use of water resources and pollution)
- The BBPM exposure to environmental risks is limited, with **biodiversity loss** and **circular economy** being the drivers to which BBPM is potentially more exposed

### Portfolio transparency: Transition Risk

### **METHODOLOGY**

- Micro-sectorial analysis (NACE) classification), aimed at providina an indication of the **transition risk** associated with the Industry of the counterparty
- For larger corporates or those operating in the sectors most impacted, the methodology involves also individual data collected from Non-financial reporting, ESG questionnaires (completed as part of the credit disbursement process) or based on estimates of GHG emissions sourced by qualified external infoproviders
- Construction and RE sectors assessed with an ad hoc methodology.
- Risk scoring from 0 "Very Low" to 4 "Verv Hiah"
- Exposure to sectors with High and Very High transition risk limited at 18.4%

### Portfolio transparency: Physical Risk

### METHODOLOGY

- The analysis is based on:
  - Mapping of the Italian territory according to exposure to the different risk events considered;
  - Geo-location of the property, through its address and positioning within the maps of risk;
  - Identification of a risk event score based on the exposure level of the property
  - Calculation of the synthetic physical risk exposure score of the property (from 0 "Very Low" to 4 "Very High") through aggregation
- Sources used: public data<sup>1</sup> and third-party proprietary data
- <u>The low exposure to physical risks is driven by the geographical</u> distribution of our credit portfolios, concentrated in the North of Italy

#### MANAGEMENT OF PHYSICAL RISK

- Physical risk assessment on collaterals and on counterparty operations included in the evaluation of credit risk
- ESG questionnaire integrated with questions regarding the presence of mitigating factors of physical risk (business continuity plan and/or insurance policies)

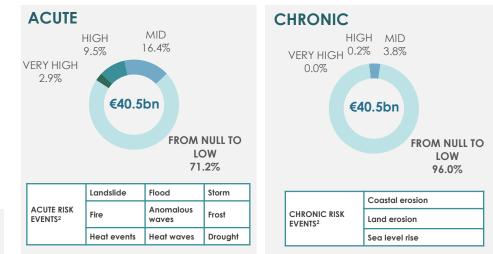

Managerial Data

Notes: 1. For example: Istituto Superiore per la Protezione e la Ricerca Ambientale (ISPRA), Copernicus, European Space Agency, European Soil Data Centre (ESDAC). 2. Risk events mapped by the EU Taxonomy.

See the 2023 Consolidated Non-financial report for further information and details.

GBV as at 31/12/2023

## Regarding the analysis carried out on **physical risks for the productive assets of NFC clients**, a focus on the exposure towards counterparties operating in the sectors of agriculture, construction and tourism is provided in FY 2023 Consolidated Non-financial Report

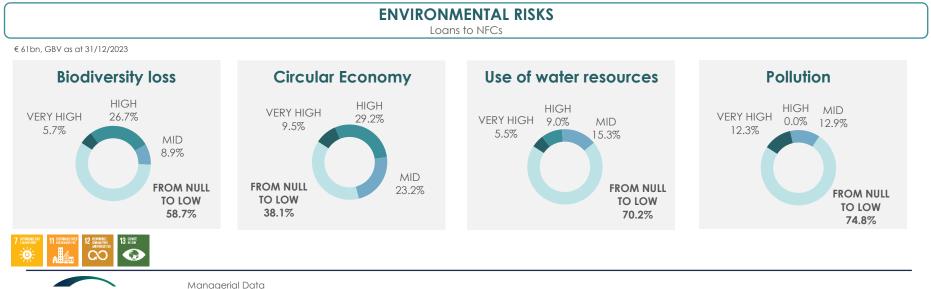

### Portfolio transparency: Environmental Risks

### **METHODOLOGY**

- Exercise aimed at measuring the exposure of our loan portfolio towards NFC clients with respect to environmental risks performed in 2023
- The variables of environmental risk considered are consistent with the EU taxonomy

**BANCO BPM** 

- The methodology is based on **a sectoral approach** aimed at providing an indication of the environmental risks associated with the industry of the counterparty
- When such risks are deemed relevant or when information is available, the methodology involves the use of public data on individual counterparties (e.g. certifications)
